

With ASBESTOS You can storm the Sky, Space and Time!

conc. The Application of ASBESTOS for Nuclear-Waste-restore  
and other Future-Technologies.

Dear Management

A Diamond is not forever. Every Diamond is only  $C_4$  Carbon and burns into  $CO_2$  Carbondioxid. ASBESTOS is forever! The Greek Word for Asbestos is **IMMORTAL**. Therefore only Asbestos is good enough for eternal Technological-Solutions. First some Facts (Realities) about Asbestos:

- 1) Asbestos has ~~no~~ boiling (melting) Point, and for that Reason Asbestos is not and can not be, a chemical Poison. Only Asbestos Dust can be physikaly dangerous for lounges. That Danger can easily be prevented with modern sealing and filter Technologies. Binded with Cement (Eternit=Eternity) or Plastic etc. Asbestos is absolutely harmless!!!!!!!
- 2) Asbestos is absolutely Acid-Proof, Lye-Proof, Fire-Proof, Low-Temperature-Proof, Radiation -Proof and so on. The Use of Asbestos has proofed that Reality until Today.
- 3) Only the Diss-Management in the Past, has suppressed the real Value and Meaning of Asbestos. That is until today unjust!  $\forall$  Substitudes for Asbestos like Ceramics etc. have failed in the Past at extreme Conditions because they have Limits. Asbestos has not such Limits!!!!!!!
- 4) Plutonium, Uranium, etc. are in a thousand Times higher Danger-Class, than Asbestos, and Half-Life Times like a 500 000 Years etc. ONLY Asbestos can stand (Forever). For that Reason EVERY Nuclear-Waste Container should be embeded (Surrounded) with Asbestos (sealed) (Sealed-Asbestos), or at least with Asbestos-Cement (Eternit=Eternity), before It is restored under the Earth or in the Ocean etc. In great Deeps, the Risk of Asbestos-Dust doesn't exist anyway for the Surface. In case of Earthquakes, Fire-Storms, Grönd-Water, etc. etc. Asbestos will stand anyway, as it is shown in Chapter 1 (one) of this Letter. It is and will be impossible to restore Nuclear-Waste, forever (eternal-Time), without using Asbestos (Eternit). Only Asbestos guarranties a Maximum Security for that Duties, because it is the best Material-Isolator, that You can find under the Sun on Earth. So there is no other secure Solution for the Nuclear-Waste Restore Problem thinkable, than Asbestos, because a Maximum Security is needed!!!
- 5) Also future Technologies cannot be realized efficiently without Asbestos. For Example: The Nuclear-Fusion-Reactor ( $H_1 + H_1 = He_2$ ) cannot be started without Asbestos. Mirror-Solar-Power Stations in the Deserts have failed (economically, technicaly, etc.), because Substitudes like Ceramics etc. couldn't stand such high Plasma-Temperatures. Asbestos is Plasma-Proof. Ceramics at Space Shuttles should be replaced by (sealed) Asbestos. Air and Space Missions should be secured with Asbestos anyway. Isolation for Security will be also needed for other Technologies like Lithium-Batteries, etc. etc. Protection and Isolation with Asbestos is necessary for future Technologies under EXTREME Conditions anyway. (Off-shore Oil Drilling etc.)

In case there are many Kinds of also (Dust-Proof) Asbestos-Species to be found in Canada. For more Information please contact: **Asbestos Corporation LTD. 840 Boulevard Ouellet Ouest, Thetford Mines, Quebec, JG6G 7A5 QC Canada, or LAB Chrysotile Route 112, Thetford Mines Quebec, G6H 2M9 QC Canada, or Mazarin Mining Corp. INC Canada, 9502600 Boullaurier, QC G1V 4V2 Canada.** For that we wish You Reason and Insight

P.S. The following Page shows some Facts and Realities of the Past about eternal Asbestos in Germany, Canada, and other Parts of the World until today, and It's use in Industries and Society etc.!!!!

Sealing up of Immortal-Asbestos **CAN** be done!

Sealing up of Nuclear-Waste (Containers etc) **MUST** be done!

Only Asbestos is the Solution of the worldwide (high) Nuclear-Waste Problem!

Asbestos has no Ignition (Burning) Point.

Asbestos provails!

Asbestos-Cement  
Serpentinit  
CUNIQUEX

Asbest [griech. unvergänglich] der, einziger mineralischer Faserstoff, in zwei Arten vorkommend (Hornblende und Serpentin), seidenglänzend, biegsam, säure- und feuerfest. Der A. wird zu feuerfesten Geweben, Asbestpappe, Dichtungen und Wärmeisolierungen verwendet. Er findet sich in Gesteinen eingeschlossen Hauptfundort: Kanada. (Auch Laugenfest)
