

pi-vote - Bug / Feature #5367

PiVote 1.4.1.0 almost unusable on Ubuntu 12.04 LTS

12 June 2013 20:18 - Simon Rupf

Status:	New	Start date:	12 June 2013
Priority:	Normal	Due date:	
Assignee:	Exception	% Done:	0%
Category:	Usability	Estimated time:	0.00 hour
Target version:		Affected Users:	
Request Type:	Bug Report		
Affected Program:	Debian Installation		
Description <p>Just installed the new version. During installation of the deb-package there was a mono-Process using a lot of CPU-Power for a couple of minutes, newer had this before. When I started circle my screen starts flickering like crazy. The desktop is not usable anymore and I had to switch to the console ([Ctrl]+[Alt]+[F1]) to kill the task.</p> <p>On the second try I launched the old PiVote client, but this also started circle and the flickering. After experimenting a bit I figured out that it apperently tries to resize automatically between full screen and over all four virtual desktops (the flickering is visible when you try to switch to a different desktop). After manually adjusting the window to full screen ([Alt]+[Space],[X]) the flickering stops and after switching the desktop a couple of times the window is visible.</p> <p>I then tried to create parts but then a new window launched and filled my desktop with flickering. Since we should urgently start this voting I stopped further experiments, killed the task and will now revert to 1.4.0.0 which had some resizing issues to but was usable.</p> System Settings <p>Ubuntu 12.04 LTS 64 Bit PiVote 1.4.1.0 Screen 1280x1024 @ 60Hz 24bit Intel Corporation 82G33/G31 Express Integrated Graphics Controller (rev 10) standard Ubuntu installation, no compiz, cubes or other fancy stuff</p>

So, nachdem ja nun die Abstimmung aufgelegt ist, bin ich nun wieder für experimente zu haben. Wenn ich Dir irgendwelche Diagnose liefern kann oder dabei Helfen kann eine Testversion zu testen, stehe ich Dir gerne zur Verfügung, Mail genügt.

#2 - 17 June 2013 23:14 - Exception

Ich hab grad versucht, das Problem nachzuvollziehen. Auf meiner VM mit Ubuntu 12.04 ist mir das aber nicht gelungen, d.h. Circle 1.4.1 hat funktioniert.

Ich werde es auf einem Rechner probieren, sobald ich zurück bin.

Ok, gib mir Bescheid, wenn ich Dir irgendwie bei der Diagnose helfen kann. Würde es helfen zu wissen, ob es auf der Konsole funktioniert? Ich werde es auch noch auf einem zweiten Gerät testen.
