<b>Operating System:</b>	Ubuntu 12.04 LTS	<b>Test Result:</b>	Failed
<b>Desktop Environment:</b>	Unity		
<b>Description</b>			
Fresh ubuntu 12.04 install. Window is double the size of the desktop. When maximizing the window it resizes to something usable. Archive has now buttons. After resizing and maximizing the window looks weird. See attached screenshots.			
Improvement: No more flickering like in 1.4.1.0. At least the window stays the same size.			
Test Script: Where is it installed, did not find any in /opt/pivote? (selected one because i was forced to by the form)
